

TESTING KITS FOR DRUGS

# Procedure Card for IDT2400T

## OPIATE IDENTIFICATION

### Substance & Trace Test

**Read Before Use**

As a precaution, gloves and eye protection should be worn when handling drug substances and using test units. Do not puncture any part of unit. Do not remove probe once a capsule is broken. In the unlikely event of a spill, rinse affected area thoroughly with water. Keep out of reach of children. All results are presumptive. If necessary, further testing by a competent drug testing lab can provide additional identification.

Test Preparation

**1** Remove the Smart-Tip™ probe from test unit.

**2** Sample suspected substance or surface. **Substance & Trace Material**

Swipe the paper of the Smart-Tip™ probe across the suspect substance or surface.

**3** Lock Smart-Tip™ probe into test unit. Press firmly.

**STOP**

**Do not continue unless probe is locked below the Flex Pins and cannot be removed from the test unit.**

Identification

**4** With **thumb and forefinger**, squeeze chamber 1 until capsule breaks.

**5** Gently shake test unit for 2-3 seconds.

Results

The appearance of a purple color within one minute, in either the front or back window, indicates the presence of an opiate such as **Heroin, Morphine or Codeine**.

If no purple color develops, an opiate, such as Heroin, Morphine or Codeine, is **not** present.

**Proceed to Dilution (steps 6-9), regardless of whether or not a color appeared.**

Dilution

**6** With **thumb and forefinger**, squeeze chamber 2 until capsule breaks.

**7** Gently shake test unit for 2-3 seconds.

**Wait 5 minutes.** The test window will warm up. This is normal.

Dilution

**8** With **thumb and forefinger**, squeeze chamber 3 until capsule breaks.

**9** Gently shake test unit for 2-3 seconds.

The test window will warm up. This is normal.

**Disposal**

After Dilution, the test kit is safe to dispose of in the trash.
